Psychology
Horology
Guitar

About

Hi! I'm very glad you're reading my resume! Here's a few points I think you should know about me:

1. I'm currently looking to work as a Software Developer or Consultant.
2. I am very open about my working hours; I like to work!
3. The professional trait I like most about myself is, I'm very persistent about finding a bug in code, I most often get to them.
4. The anecdote to prove it is once (more than once) I broke my computer's OS boot but managed to fix it.
5. I think it would be hard to back up my soft skills with a story so more than backing them up, I want to state that I enjoy working under those conditions, makes my job feel more relaxed.
